Q: What is the best way to install HTML5/CSS3/Javascript editors on Windows? I've always used Notepad++ for my HTML, Javascript, and CSS editing needs, but recently upgraded to Windows 8.1 and now Notepad++ has stopped working as a stand-alone editor. In the past, I've found that I could get the stand-alone version to work on Windows by installing a couple of different Visual Studio add-ons, but VS 2012 is missing some of the functionality I need (e.g. markdown editor). There are a few other editors like Sublime Text 3, Brackets, Atom, etc., but I want something that's standalone, doesn't require any additional add-ons, and is compatible with Windows 8.1 and later. A: I have an open source web based editor written in C# for HTML, CSS and JavaScript. You can use it on Windows 8.1 or later, or any browser that supports WebSockets. If you like this, then it is well worth downloading the code and hosting it yourself. You can get the code for Windows Installer installer from Github, or if you prefer Sourceforge. An article about setting it up. A: I use a combination of Notepad++, Sublime Text 2, Google Chrome and nbconvert to convert Markdown to HTML. For basic Markdown editing, I find it to be very effective. The other editors might have extra functionality that I'm missing. Q: Silverlight 3.0 Transforms, does it work on multiple elements? Does silverlight 3.0 support transforms on multiple elements at the same time? Does anyone have an example? I've tried: And got the following error in Expression Blend: Failed to create an adornor for the following item 'TextBox.Width', because a transform was already in progress for that item. The transform is already being applied to the following element(s): 'TextBox
