Design and synthesis of selective aryl C-glycosylation in aqueous conditions using N-benzoyl-N'-benzylthiourea as the catalyst. A new diazide derivative of thiourea catalyst was synthesized and used for the direct C-glycosylation of aryl halides with different sugars under aqueous conditions. This catalyst is the first example of C-glycosylation which shows high

yield and excellent stereoselectivity for direct aryl C-glycosylation. Telegraph: The Debt Ceiling Is No Solution to Our Federal Budget "There are not enough wealthy Americans or rich Americans to solve this debt ff5e5ca8c9
