## What's New in the Navitel Navigator Update Center?

Roughly a year ago I wrote Navitel Navigation for Pocket PC devices, an app that let you download Navitel maps to USB memory sticks. At the time, the Navitel company didn't have any internal maps for navigation. In addition, the app was pretty much an app without any connection to a PC, and thus couldn't be used for updating the maps on the device. It was necessary to manually download the maps from the Navitel website. In March 2009 I wrote another app, Navitel Navigator Update Center, a free app that allowed you to download Navitel maps from the Navitel website and update them on your device. Although the Navitel Navigator Update Center didn't automatically detect your Navitel navigator, it was possible to directly select Navitel models from a list of devices, their version and installed maps. Navitel Navigator Update Center updated the maps for Navitel navigators automatically, and automatically set up a cache directory on the USB memory stick, as well as a proxy configuration for the Internet connection. And today I decided to release a new version of Navitel Navigation for Pocket PC devices. I decided to do this because the Navitel company has now the internal maps for Navitel navigators, and also because it's possible to select the Navitel Navigator Update Center in the configuration window of Navitel Navigation. You can use the Navitel Navigator Update Center to download Navitel maps for a specific Navitel model, and then update your Navitel car navigation device with the updated maps. I'm also adding a few new features: - It's possible to select maps for Navitel navigators with a "buy" button, and also choose the interface language; - New maps have been added, in particular for Boston, Montreal and Chicago areas. Description: Following a quick setup, the maps updater automatically detects any Navitel device connected to the computer and shows the Navitel Navigator current and latest version available, along with the current and latest maps available. From the main app window, it's possible to download, update and buy maps. Options can be configured when it comes to the interface language, whether or not to use the Navitel updater service, and whether or not to apply a proxy configuration to establish the Internet connection. In this case, it's necessary to enter the server address and port number, login (username) and password. An authentication proxy can be optionally enabled. There are four versions of Navitel Navigator available for Windows CE: - STD\_EXT\_INET - with online services for portable navigators without built-in memory and car audio units (registered with SD

## **System Requirements:**

Minimum: OS: Windows Vista (SP2) Processor: Intel Pentium 4 (3.0 GHz) Memory: 2 GB RAM  
Graphics: DirectX 9.0 compatible video card with 128 MB RAM DirectX: Version 9.0c Hard Drive: 1  
GB available space DirectX: DirectX 9.0c Network: Broadband Internet connection Additional Notes:  
The DX11 implementation can be a large download so we are providing a new installer (version 7)  
that contains
