A few other applications give Tradify a good review. The present invention relates to a process for producing acrylic polymers. More particularly, it relates to a process for producing acrylic polymers which are suitable as an engineering plastic. In general, acrylic polymers have an excellent light stability and weather resistance and are used as an engineering plastic or the like in various fields. The acrylic polymers are however insufficient in heat stability. For example, when used in an engine room, an acrylic resin undergoes discoloration at a high temperature in a short time. For this reason, the acrylic polymers have

The KEYMACRO file contains user preferences settings that are applied to all the applications. Its content is stored in text files named ".KEYMACRO.config" (only when the ".KEYMACRO.config" is available), ".KEYMACRO.local", ".KEYMACRO.dtd" and ".KEYMACRO.ini". The file ".KEYMACRO.config" is used to define the KEYMACRO data type as well as the location of the file that stores the default values for the other files. The ".KEYMACRO.local" contains all the translations that are local, while the ".KEYMACRO.dtd" is used to define the data type used to store the translations. All the translations are stored in files with names formatted as ".dict". The extension ".dict" is used to denote a dictionary file. There are several data type for the dictionary files. They are "String", "Constants" and "Variables". The ".dict" file names are: .String.dict, .Constants.dict and .Variables.dict". The software performs the following functions:1.- Adds keywords and their translations to the list of keywords (they can be either in the English language or in the translated language)2.- Allows to add and edit the translations for the keywords (by entering the localized text).3.- Allows to define the translations for the non-user specified options (for example: 'New user' to 'You are a new user')4.- Provides a small number of templates for the user to make some translations of the screen.5.- Appends a message to the project log file with the list of the words that have been translated (in case of errors or exceptions). It also has a dictionary manager tool which allows you to:1.- Organize the translations into the different categories (for example: you can define the translations for 'Default' and for 'Non-user specified options').2.- Check the existing translations for the different words (for example: you can check the translations for 'Defaults' and 'Non-user specified options').3.- Delete the previously saved translations (for example: to delete the translation for 'Default').4.- Send the selected dictionary file 2edc1e01e8
