KeyMACRO is a product that allows you to use the Windows key to execute a command from a specific folder (or subfolder). This feature is useful, for example, if you have dozens of images in your "Pictures" directory and you want to open an image from the current directory with your default image viewer. KeyMACRO offers 2 ways of using this feature. One of them involves the creation of a shortcut (with the "Add or modify a shortcut" option) and the other is based on the creation of a shortcut on the Start Menu (using the "Add a shortcut to Start menu" option). The shortcut is created in the "Create shortcuts" folder and you can customize its icon. The program automatically adds a keyboard shortcut (i.e. "Windows Key + L" by default). A folder must be selected before starting the shortcut creation process. You can choose either a specific folder or all the contents of the current directory. You can either add a specified subfolder to the shortcut (via the "Add a subfolder to this shortcut" option), or just add a specific file (via the "Add a file to this shortcut" option). The shortcut includes the name of the subfolder and the file, the full path to the file, the location and the size. The location of the shortcut will be indicated on the Start Menu. You can modify the shortcut using the "Modify the shortcut" dialog (via the "Change shortcut keys" option). You can uninstall the program by deleting the shortcut in the "Create shortcuts" folder. However, if you want to remove the shortcut on the Start Menu, you need to delete the "Start Menu Items" file. Is it possible to make my fingers stop shaking when drawing?!? The same as any other MS Paint, it has a basic feature that everybody needs, for example you can load from the clipboard. But that's it. I really do not like how they put the old "upload image" feature in one of the buttons and the most important one in another. Such inconsistency makes you hit the "save image" twice. The same is with the "shape" tool. This should be like the first one: click, drag, fill the shape, click again, export. It's a bit complicated to import an image and bring the color options to show (and you can't make them permanent). The only thing that could be improved is to put the sizes right at the bottom.

You can use the default colors or choose any other one from the color palette. If you need to sort

If there is no folder or file with the same name, a "New Folder" option will appear. You can browse images by applying a specific order (recently used or in ascending or descending order, according to the number of views or the date created). You can also sort them by thumbnails, date and size, so you can get to images by category.
