What's New in the Deskzilla?

DeskZilla is a desktop client for the Bugzilla bug tracking system. It has been optimized for Windows and it will work well with Java 1.6. DeskZilla has many options: Bugzilla server directory list (bugzilla.deskzilla.com/bugzilla_server/servers) Bugzilla server URL Bugzilla browser mode Bugzilla access type Bugzilla cookies (HTTP Basic Authentication) Bugzilla virtual server Bugzilla web browser Attachments/Entries Descriptions Progress bar Task bar integration Window decorations Java runtime environment Usability HTML export Html code editor CSV/TSV export RSS feed Support forum Issue creation Support threads Bugzilla logs Exported content as files Virtual server timeout Unified Windows log viewer Check out this version of DeskZilla! It includes the following changes: Taskbar integration. Bugzilla 4.1.4 (thank you, Jackman!) Virtual server timeout handling. Bugzilla 4.1.4 (thank you, Jackman!) CSS file and some other improvements Integration with external applications Bugs in build/programs are reported Bugs in build/programs are reported XML export. The new version is called beta. In case you want the stable version, download the last version of DeskZilla and extract it to your desktop. To switch between versions, you can rename the folder of the last version to beta.desktop and the new version will be displayed automatically. If you experience a problem with the installation, just download it from the Development version page. Known Issues DeskZilla is still in beta development, therefore, use it at your own risk. Here are the major issues: Taskbar integration: It can happen that an application is not displayed in the taskbar Import/Export: There are some errors when opening files exported by DeskZilla (especially CSV files) Email to the bug tracker: A link is sent

System Requirements For Deskzilla:

Min. 20% Ram 20% CPU 40% of RAM 1GB of Video Memory (GPU Benchmark below) At least 512 MB of VRAM Additional Notes: This benchmark is designed to test the memory bandwidth. GPU Benchmark: This test runs Max Payne 3 at 1080p and 60FPS and measures the minimum FPS achieved. Also, runs at 4K and does the same, except 60FPS is the minimum FPS achieved. Minimum FPS = average of
