The mannose-binding lectin (MBL) specificity of a serum with MBL activity was examined by affinity chromatography, by measuring inhibition of hemagglutination in microtiter assays, and by measuring MBL-mediated inhibition of hemolysis and cellular C3 deposition. This serum showed only one type of specific reaction. Hemagglutination by the human influenza virus A/WSN/33 (H1N1) was inhibited by MBL-bearing rat serum in a dose-dependent manner. Hemolysis of erythrocytes by influenza virus was inhibited by MBL-bearing serum, but not by the MBL-deficient serum. C3 deposition on cells by influenza virus was inhibited by MBL-bearing serum, but not by the MBL-deficient serum. The results demonstrate that MBL-bearing serum recognizes specific microbe
