How to Use Alcor USB Flash Drive Tools to Fix Fake USB Drives

Have you ever bought a USB flash drive that turned out to be fake or corrupted? If so, you might be able to fix it with Alcor USB Flash Drive Tools. Alcor is a manufacturer of flash controllers and provides various tools to repair or format USB flash drives with their chips. In this article, we will show you how to use Alcor USB Flash Drive Tools to fix fake USB drives.

What are fake USB drives?

Fake USB drives are flash drives that have been manipulated to show a higher capacity than they actually have. For example, a 32 GB flash drive might be modified to display 128 GB on your computer. However, when you try to copy more than 32 GB of data to the drive, you will encounter errors or data loss. Fake USB drives are usually sold at very low prices on online platforms or markets.

How to identify fake USB drives?

One way to identify fake USB drives is to check the VID (vendor ID) and PID (product ID) of the drive. These are unique identifiers that can tell you the manufacturer and model of the flash controller. You can use a tool like ChipGenius or Flash Drive Information Extractor to get the VID and PID of your USB drive. If the VID and PID do not match the brand or model of your drive, it might be fake.

How to use Alcor USB Flash Drive Tools?

Alcor USB Flash Drive Tools are designed for flash drives with Alcor controllers. You can find the list of supported controllers on their website^[2]. To use Alcor USB Flash Drive Tools, you need to follow these steps:

1. Download the tool that matches your controller from their website^[2] or from other sources^[3]. Make sure you scan the file for viruses before running it.
2. Extract the tool from the .rar archive and run it as administrator.
3. Insert your USB flash drive into your computer and wait for it to be detected by the tool.
4. Select your drive from the list and click on "Start". The tool will scan your drive and show you its real capacity and status.
5. If your drive is fake or corrupted, you can try to fix it by clicking on "Low Level Format". This will erase all data on your drive and restore its original capacity.
6. If your drive is not fake or corrupted, but you want to format it anyway, you can click on "Format". This will perform a quick format of your drive with FAT32 file system.
7. When the process is finished, you can eject your drive and use it normally.

Conclusion

Alcor USB Flash Drive Tools are useful tools to fix fake or corrupted USB flash drives with Alcor controllers. However, they are not guaranteed to work for all cases and may cause further damage to your drive. Therefore, you should always backup your important data before using these tools and use them at your own risk. If you have any questions or problems, you can contact Alcor

support⁴ or seek help from online forums⁵.
