

Samsung Wireless Speakers Best Buy

Both Bose and Sonos create excellent-sounding audio tech that tends to be at the premium end of the spectrum. We love Bose products and highly recommend them, but in terms of the best Bluetooth speakers and portable speakers, we think Sonos is the better option. In terms of which is the best brand for Bluetooth speakers and portable speakers, we don't have any Sony products currently on our list. Whereas the Bose SoundLink Flex is one of our top choices. However, if we were asked to compare the brands in other arenas, like the best true wireless earbuds, then we might have to go with Sony's WF-1000XM4s. The best Bluetooth speakers don't only offer convenience and portability, they sound fantastic, too. Wired optical audio and USB connections are still going to deliver the best sound quality possible, but these Bluetooth speakers are impressive when it comes to performance. The only difference is you're getting added ease and portability. The only downside is that with so many fantastic Bluetooth speakers on the market, it can be hard to pick the best one for you. With two quality drivers, a solid app that unlocks playback from hundreds of wireless sources, multi-room capabilities and smart audio-tuning tech which tweaks the output based on the speaker's immediate surroundings, the Sonos Move is engineered well beyond your average Bluetooth speaker. It's a versatile speaker, one that stands solidly alongside the non-portable Sonos speakers that the company made its name on. While we weren't as impressed with the UE Boom 3 as we were with its predecessor the UE Boom 2, this is still one of the best Bluetooth speakers you can buy today. This is a speaker that can get loud and not distort at higher volumes. It's also light enough to carry on a camping trip and remains durable enough to tumble in a bag unprotected. First up, what do you need it for? All of the speakers here can be used as outdoor speakers, but if you specifically want an outdoor speaker it's worth looking for rugged, drop-proof casings and dust and water resistance or even waterproofing to protect your speaker from the elements. And if there's any likelihood that your speaker will get dunked in water or just left out in the rain, you might also want to check out our guide to the best waterproof speakers. Some of these Bluetooth speakers come with handy additional features baked in, such as voice control from Amazon Alexa and Google Assistant. This means your Bluetooth wireless speaker can double as a smart speaker, which you can use to control many smart home devices. Or you could simply ask it nicely to play your music so you don't need to get up from the sofa. When we test the best Bluetooth speakers we look at three areas in particular: sound quality, of course, but also portability and durability: are they too heavy to haul around for more than a few minutes? Will they fall to pieces if they are accidentally knocked off a table? We also consider how easy they are to set up and use, how reliable their Bluetooth connections are and how long you can reasonably expect from their batteries when you're out and about. That's why we're confident that these are the best Bluetooth speakers you can buy today, on Prime Day or on Black Friday. With more years in this game than we'd care to admit behind us, we are truly confident that our star-rated reviews are the best indication of the quality of the Bluetooth speakers in this list. There are no sales teams involved in our verdicts, which means if we don't like it for sound, design, usability and features, we simply won't recommend it. Looking for some hi-res audiophile speakers to go with your record player? Check out the best stereo speakers. Bored of your TV's lackluster audio? Try one of our best soundbars or Dolby Atmos speakers on for size.
