

Where Can You Buy Gluten Free Beer

[DOWNLOAD](#)

If you are wondering if beer is safe to consume for those with celiac disease, gluten-sensitivity, or gluten-intolerance, the answer is no. Most widely available beer brands contain wheat, rye, or barley which are not safe for a gluten-free diet. While some people with gluten-sensitivity are able to digest some beers, such as Corona or Bud Light, these beers still contain gluten ingredients. The only completely safe gluten-free beers to consume are those made entirely from gluten-free grains, such as rice, sorghum, or GF oats and produced on dedicated gluten-free equipment. Listed below are the most commonly stocked gluten-free beer brands, tasty for drinking or to use in recipes like chili or gluten-free beer bread. These contain less than 20 ppm gluten and are brewed on dedicated equipment. These craft beer brewers offer various styles, such as stout, pilsner, IPA, and Belgian. While traditional beers use malted barley, wheat, or rye, gluten-free beers use only GF grains, such as sorghum, millet, buckwheat, and rice. They are also produced in facilities free of cross-contamination. However, there is a drawback. They cannot be definitively tested for how much gluten remains, and therefore not safe for those with celiac or highly sensitive. If these are not a personal concern for you, refer the beer list below. If you are having a hard time landing on a gluten-free beer you enjoy there are alternatives, such as canned seltzers, hard cider, canned mixed drinks, and hard kombucha. Always check the label before consuming. Budweiser, an American-style lager, contains barley malt, rice, and hops so it is not gluten-free. Like Bud Light, some tests indicate it has a low ppm of gluten, but still contains ingredients that are not safe. Kirin Ichiban beer is a Japanese-style pilsner brewed with malt and hops so it is not gluten-free with malt being the culprit. In fact, it seems to have a higher gluten content due to how it is brewed. Orion beer is described as a Japanese rice lager, which could be confusing considering rice is gluten-free. The ingredients listed are malt, hops, rice, and corn, with malt being the ingredient that is not gluten-free. Because Orion contains malt it would not be considered gluten-free. While Michelob Ultra is lower in calories and carbs, it contains barley malt so it is not gluten-free. This also includes other varieties, such as Michelob Ultra Amber Max and Michelob Ultra Pure Gold. Redbridge lager is a widely accessible gluten-free beer brewed by Anheuser-Busch. Redbridge is made without wheat or barley, instead using the gluten-free grain sorghum to make this a beer safe to enjoy. There are beers brewed with rice, such as Sapporo, Kirin, Michelob Ultra and Budweiser, but these are not gluten-free because they add malted barley as well. However, some gluten-free brewers make rice beer without the addition of malt so they are safe for those with celiac disease. Heineken beer contains barley, when means it is not gluten-free. Similar to Corona or Pacifico it is processed in a way that significantly lowers the gluten to below 20ppm, so some people can tolerate it. For those with celiac or highly sensitive, it still contains a gluten ingredient and can cause reactions. Gluten-free beer and gluten-reduced beer are not the same thing. One is safe for those with celiac disease (gluten-free beer) and the other one is NOT. And now you can find your favorite gluten-free beers all over the world in one amazing app.

Ok...so I'm guessing you are here because you are looking for three things: 1) the unfiltered truth about gluten-free and gluten-removed beer and the vital difference between them; 2) what beers are gluten-free; and 3) where exactly you can find gluten-free beer. Then celiac hit. **BAM!** No more beer. I was crushed. I was devastated. I was crestfallen. You get the point. But wait...there is a gluten-free beer on the market called Red Bridge. **YAY!** I can drink beer after all. One taste and **BLAH!** No more beer. **Which beers are gluten-removed and should be avoided?** Good question. The two biggies that own the market are Omission and Daura and these are the ones that you'll find in the gluten-free section in grocery/liquor stores and under gluten-free beers on restaurant menus. Like I said it pi\$\$e\$ me off. There are a handful of other companies that make gluten-reduced beer. Just be real careful to check all labels. Ah...another fine question. Because let's be honest, as much as we love gluten-free beer, tons of places still do not carry any (but gladly carry gluten-removed beer!) This frustration led to me including this feature on the Gluten Dude app. See those screenshots above? That is my app and there are over 17,000 stores, bars and restaurants on the app that carry gluten-free beer. I've been to every one of these places. Just kidding. The beer companies send me their locations every 3 months and I add them to the app. My name is Lindsay, and I have been completely gluten free since 2010. I was 22 years old when I cut

out gluten (and pasteurized dairy) and it was absolutely necessary. My story is an unfortunately common one for those who suffer from gluten intolerance or Celiac Disease. Enter Best Gluten Free Beers! This blog is all about spreading the love (and awareness) of gluten free beer to those who are desperately seeking it. I publish gluten free beer brand lists, beer reviews, brewery tours, interviews, lifestyle articles, and write about the difference between gluten free and gluten reduced beer. There is also an entire section of the blog dedicated to gluten free homebrewing for the those of you who are tired of waiting and want to brew your own! (There is even a free recipe and step-by-step guide available for download.) Before long, it became clear to me that my audience was not just in the United States. The Best Gluten Free Beers community is now worldwide, and I receive messages regularly from people residing in other countries that are having the same trouble with access to good gluten free beer that many of us struggle with in the States. I would love to know more about YOU, and what your gluten free journey has been like. If you have questions, recommendations, or suggestions for things that could be helpful to include on the blog, shoot me an email at bestglutenfreebeers@gmail.com! I love to chat with fellow beer lovers. * Living the Dream adds Clarity Ferm to nearly all of their beers to make them gluten reduced. According to their website, this applies to everything but their wheat beers which they do not make gluten reduced. They are gluten full. ** I recently received an update from a reader that Uinta Brewing has transitioned from making gluten free beers, to making gluten reduced beers. I am not clear as to when this change was made, but please be advised if you were accustomed to their gluten free offerings. New Belgian now has two gluten reduce beers; Holidaily Brewery has several gluten free beers, all of which are great; Cannonball Creek Brewery in Golden, CO has a rotating menu of gluten reduced beers; and as mentioned above, Stone Delicious IPA is awesome and is gluten reduced. Also, beers like Coors Light, Modelo Especial, Pacifico, Corona Extra, Tsingtao, and PBR, while not marketed as gluten reduced, have all been tested in the past for less than 20 ppm gluten. Thank you for building this list!

I recently found out I have celiac. When my doc told me no more beer I was crushed. Thanks to you, I see there are lots of beers that are gluten free.

One of my favorites is Guinness, is Guinness gluten free? Hi Lindsy.

There is a brewery in Belgium that produces 2 gluten free beers; Mongozo Premium Pilsner and Mongozo Buckwheat White. My wife has Celiac disease and her favourite beer is the Mongozo Pilsner.

On another note, Snowman brewery in Canada has ceased production. You should take it off your list.

Regards,

Andreas Nietmann How exciting! Can you email more information about the brewery, the taproom, and the beers you have available? It may be appropriate to add you to more than one of these lists. Is this a dedicated gluten free brewery? Stoke NPA from Nelson New Zealand is a hand crafted gluten reduced beer with a certification level below 3 ppm. Not a big choice in New Zealand so its good to add a third to the list even if it not quite gluten free . It is just over half the cost of our other two certified gluten free beers. Whether for diet or health concerns, giving up gluten used to mean missing out on the wildly flavorful new craft beers. The few gluten-free offerings available were bad copies of the real thing, like a tofu dog standing in for an all-beef frankfurter. A Celiac disease diagnosis led founder Matt DelVecchio, a hard-core homebrewer, to switch gears and start making gluten-reduced beer. His San Diego brewery sources locally produced honey to make this sweetly scented, dry-finishing beer, which earmarks a portion of proceeds to the Planet Bee Foundation. Unlike most traditional beers, gluten-free varieties are made from gluten-free grains and regulated by the Food and Drug Administration (FDA) instead of the Alcohol and Tobacco Tax and Trade Bureau (TTB) (2). If you enjoy regular beer, you may find that gluten-free beers have a different taste profile due to the grains used. Early gluten-free beers often used sorghum, but many brewers have moved away from this ingredient because of its sour flavor. You can find kits to brew your own gluten-free beer in specialty stores or online. They usually include a sweet sorghum syrup as the

main carbohydrate source, as well as yeast, hops, and other flavoring ingredients. It all starts with the ingredients. With the utmost care, we hand select naturally gluten free grains, yeast strains, and Pacific Northwest hops that lead to boundary pushing craft beers that delight beer lovers near and far. They opened their brewery in 2011, and have been in the same facility since. All of their beers are brewed in that facility, which is also where you can go to try some of their beers on tap (or pick some up to go).
