Pod Farm is not only a great tool for guitar recording, but also for other instruments and vocals. You can use it to process any audio signal that you can connect to your Line 6 hardware device. For example, you can plug in a bass guitar, a keyboard, a microphone, or even an external audio source like a CD player or a smartphone. Pod Farm will let you apply the same amp models and effects that you use for your guitar to any of these inputs.

Another cool feature of Pod Farm is that you can use it in dual mode. This means that you can split your signal into two independent paths and apply different tones and effects to each one. You can also pan them left and right or blend them together. This way, you can create rich and complex sounds that would otherwise require multiple devices or software. For instance, you can use dual mode to create a stereo chorus effect, a dual amp setup, or a wet/dry mix.

Pod Farm is also compatible with most DAWs and other audio software. You can use it as a plug-in and access its features from within your recording or editing program. This makes it easy to integrate Pod Farm into your workflow and streamline your production process. You can also use Pod Farm as a re-amp tool and change the tone of your recorded tracks without having to re-record them. This gives you more flexibility and creativity when mixing and mastering your songs.
