# How to Download WhatsApp Business API APK

If you are looking for a way to communicate with your customers at scale, you might want to consider using WhatsApp Business API. WhatsApp Business API is a platform that allows medium to large businesses to send and receive messages, notifications, and updates from their customers on WhatsApp, the most popular messaging app in the world. In this article, we will explain what WhatsApp Business API is, how to get started with it, and how to use it effectively.

## What is WhatsApp Business API?

WhatsApp Business API is a product that enables businesses to connect with their customers on WhatsApp in a secure and reliable way. It is different from the WhatsApp Business App, which is designed for small businesses who personally manage conversations with customers. With WhatsApp Business API, you can automate and integrate your communication with your customers using your own technology stack and build interactive experiences that suit your business needs.

## Benefits of WhatsApp Business API

Some of the benefits of using WhatsApp Business API are:

- You can reach over 2 billion users who are already on WhatsApp and prefer to communicate on this platform.
- You can send engaging, timely, and high-quality messages to your customers, such as customer care notifications, purchase updates, appointment reminders, delivery confirmations, and more.
- You can build long-lasting customer relationships by providing personalized service and support in the channel that your customers trust and use daily.
- You can scale and integrate your communication with your existing technology stack and webhooks, without any maintenance or upgrades needed.
- You can get started quickly and test for free with free access to test numbers, code samples, a sandbox, and more.

## Features of WhatsApp Business API

Some of the features of WhatsApp Business API are:

- You can send two types of messages: session messages and template messages. Session messages are free and can be sent within 24 hours of the last customer interaction. Template messages are pre-approved messages that can be sent outside the 24-hour window or for initiating conversations. Template messages are charged per message depending on the destination country.
- You can use rich media formats such as images, audio, video, documents, and location to enhance your messages.
- You can use interactive buttons such as quick replies, call-to-action buttons, and list messages to simplify user responses and actions.
- You can use message templates to create standardized messages that can be localized into different languages.
- You can use webhooks to receive real-time updates on message delivery status, message read status, user opt-in status, policy enforcement events, and more.
- You can use the API reference, documentation, developer resources, developer community forum, and developer support to build with confidence and troubleshoot any issues.

## How to Get Started with WhatsApp Business API

If you are interested in using WhatsApp Business API for your business, here are the requirements and steps you need to follow:

### Requirements for WhatsApp Business API

To use WhatsApp Business API, you need:

- A verified Facebook Business Manager account that represents your business.
- A phone number that is not linked to any other WhatsApp account. You can use a landline or mobile number, but it must be able to receive SMS or voice calls for verification.
- A display name that represents your business and follows the display name guidelines.
- A hosting provider that meets the minimum system requirements for running the WhatsApp Business API client.

### Steps to Download WhatsApp Business API APK

To download the WhatsApp Business API APK file, you need to:

1. Log in to your Facebook Business Manager account and go to the [Developer Hub](#)
